# TECHNICAL DATA SHEET Nylatron Polyamide

Nylatron<sup>®</sup> is the Trade Name for a family of Cast and Extruded Nylon shapes from Quadrant EPP. These products are formulated to give superior performance in a variety of applications by adding proprietary additives to increase load, improve PV values, and give longer life in bearing and wear applications.

Nylatron is Nylon (Polyamide) based polymer with additves such as Oil, Moly, and proprietary fillers. These allow higher speeds, higher loads, or reduced slip stick properties. Nylon is one of the most widely used and versatile thermoplastic resins. Its combination of physical properties and reasonable price make it a favorite choice for numerous applications. Nylons toughness, wear resistance, tensile strength and lubricity make it a good choice for many mechanical machine parts.

\*Available MSM, WP, 4.6, MC901, GS, GSM, GSM (blue), LiG, LFG, GF30, 703XL.

## **GRADES OF NYLATRON®**

## Nylatron<sup>®</sup> GSM - Cast MOS2-Filled Nylon 6

Nylatron GSM cast nylon contains finely divided particles of molybdenum disulfide to enhance its load bearing capabilities while maintaining the impact resistance inherent to nylon. It is the most commonly used grade for gears, sheaves, sprockets and custom parts. It is gray-black in color.

## Nylatron<sup>®</sup> GSM Blue - Cast MOS2- & Oil-Filled Nylon 6

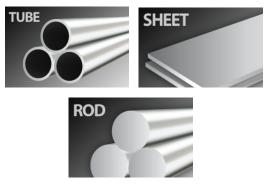

Nylatron GSM Blue nylon is the first cast nylon to combine both molybdenum disulfide and oil for the load capability of Nylatron GSM nylon, plus improved frictional characteristics. It excels in higher pressures, and at low speeds- up to 40 fpm. It offer 20% lower coefficient of friction, 50% greater limiting PV, and a lower "k" factor than Nylatron GSM, and the lowest "slip-stick" of any nylon product.

It is ideal for slide pads, thrust washers and trunion bearings. Nylatron GSM blue should be considered for any oil-filled nylon application. It is dark blue in color.

#### Benefits

- Excellent load bearing capacity Strength and toughness Superior wear resistance Low coefficient of friction Fatigue resistance Compression resistance Lightweight Non abrasive
- Applications Bearings Rollers Wheels & wear components Semiconductor Medical Wear Pads Gears Nozels Bushings Guides Seals Washers Plugs

### Nylatron<sup>®</sup> GS - Extruded Nylon 6/6, MoS2 filled

Nylatron GS Nylon is a nylon and molybdenum disulphide (MoS2) composition designed to improve the mechanical, thermal and bearing properties of type 6/6 nylon while maintaining its basic electrical and chemical characteristics.

Through compounding, finely divided particles impart extra lubricity to this nylon, permitting Nylatron GS parts to operate with little or no lubrication.

The added lubricity also contributes dramatically to component service life, making Nylatron GS a very cost-efficient choice.

Nylatron GS offers greater wear resistance, lower surface friction, higher strength and greater rigidity than unfilled 6/6 with improved dimensional stability.

30% Glass-Reinforced Extruded Nylon 6/6 30% glass reinforced nylon 6/6 is also available for applications requiring higher compressive strength and rigidity, and improved frictional characteristics.

## Nylatron<sup>®</sup> NSM - Cast Solid-Lubricant-Filled Nylon 6

Nylatron NSM is the premium bearing and wear nylon product available today. Solid lubricant additives impart self-lubricating, high pressure/ velocity and superior wear resistance characteristics. This wear resistance is delivered without either start-up or running lubrication making it ideal for bearings,

gears and wear pads.

It is a proprietary type 6 nylon formulation produced using Quadrant EPP's MONOCAST process. Nylatron NSM was developed specifically for demanding applications where larger size parts are required. In wear applications, Nylatron NSM lasts up to 10 times longer than standard Type 6 nylon.
