

TECHNICAL DATA SHEET Torlon® (PAI)

(polyamide-imide)

Torlon® is an ideal material for applications where extreme strength, stiffness, stability and wear-resistance are required. Torlon® polyamide-imide is recognized as the highest performance thermoplastic that is still melt processible and can withstand a 500°F continuous service temperature. Torlon® offers unmatched strength at elevated temperatures. It is stronger at 400°F than other engineering resins at room temperature. Toulon's® exceptional properties are the result of being transformed from a thermoplastic to a cross-linked thermoset during the extended curing process. Glass-reinforced and carbon fiber reinforced grades offer even greater stiffness plus enhanced thermal expansion properties.

TORLON® GRADES

Torlon® 4203 (Electrical Grade)

Torlon 9 4203 extruded PAI offers excellent compressive strength and the highest elongation of the Torlon 9 grades. It also provides electrical insulation and exceptional impact strength. This grade is commonly used for electrical connectors and insulators due to its high dielectric strength.

Torlon[®] 4301 (Bearing Grade)

Torlon @ 4301 extruded PAI is primarily used for wear and friction parts. It offers a very low expansion rate, low coefficient of friction and exhibits little or no slip-stick in use. Torlon 9 4301's flexural modulus of 1,000,000 psi is higher than most other advanced engineering plastics. This grade excels in severe service wear applications such as non-lubricated bearings, seals, bearing cages and reciprocating compressor parts.

Torlon® 5530 (Glass-Reinforced Grade)

Torlon * 5530 is 30% glass reinforced, compression molded PAI. It is ideal for higher load structural or electronic applications. This grade is similar in composition to Torlon $^{\circ}$ 5030 PAI (injection molded). It is selected for larger shapes or when the greatest degree of dimensional control is required. Applications include burn-in sockets, gears, valve plates, impellers, rotors, terminal strips, and insulators.

Benefits

Exceptional long-term strength and stiffness Outstanding wear resistance

Superior toughness from cryogenic up to 275°C

Resistant to strong acids and most organics Inherent flame resistance Low CLTE

Applications

Aircraft hardware and fasteners Mechanical and structural components Transmission and powertrain components Coatings, composites, additives Electric motor components Semiconductor fabrication and testing Oil and gas exploration and recovery equipment Bearing retainers

Gears

Bushings Seals

Thrust washers
