

# TECHNICAL DATA SHEET G-11

Is an industrial fiberglass thermoset composite laminate, consisting of a continuous filament glass cloth material with an epoxy resin binder. This product has characteristics of high strength, low moisture absorption, excellent electrical properties and chemical resistance. These properties are consistent at room temperature in addition to humid or moist conditions.

### **GENERAL DESCRIPTION**

Phenolic Laminates are produced by applying heat and pressure to layers of paper, canvas, linen or glass cloth impregnated with synthetic thermosetting resins. When heat and pressure are applied to the layers, a chemical reaction (polymerization) transforms the separate layers into a single laminated material with a "set" shape that cannot be softened again -- therefore, these materials are called "Thermosets". A variety of resin types and cloth materials can be used to manufacture thermoset laminates with a range of mechanical, thermal, and electrical properties.

#### **Benefits**

High mechanical strength Self-extinguishing Retains 50% of its flexural strength at elevated temperatures

## **Applications**

Electrical insulator High temperature electrical applications
